EDUCATION

Master of Science

Computer Science
Northeastern University

Bachelor of Science

History
SUNY New Paltz

CERTIFICATIONS

Privacy Management Professional

International Association of Privacy Professionals

Certificate in Writing

UCLA

TECHNICAL SKILLS

AI and Agentic Systems

- Claude/Anthropic API
- ChatGPT/Codex
- Cursor
- Copilot
- MCPs
- Agentic Workflow Design
- Agent Skills Architecture
- LLM Integration

IN BRIEF

Technical author working at the intersection of human and agentic workflows. Building systems, architecture, and AI tooling that keep technical knowledge current and accessible at organizational scale.

WORK EXPERIENCE

CoreWeave

Staff Technical Writer, Knowledge Architecture (May 2025 - Present)

- Lead a 2-person team through an internal onboarding overhaul across 11+ Engineering departments, delivering a documentation standard designed for fast orientation, minimal upkeep, and search indexing
- Built and maintained a Claude Code skill library covering internal documentation authoring, workspace health auditing, and process workflow automation, mirroring these processes in a chat-based conversational agent for company-wide, non-technical use
- Ran the Lunch & Learn educational programming, doubling cadence to twice monthly. Partnered with internal AI champions to launch a supplementary AI skills series that drew 300+ attendees per session, expanding into vendor sessions with Cursor and OpenAI
- Designed, wrote, and launched CoreWeave's AI developer tools hub from the ground up, transforming an inaccurate and out-of-date reference into a repository of living resources

Camunda

Technical Writer, Self-Managed (May 2024 - May 2025)

- Led technical documentation strategy for the Self-Managed product pillar, embedding with multiple infrastructure engineering teams to design new product user journeys and improve content accuracy across documentation sets
- Instituted recurring documentation team operations, including capacity planning, issue triage workflows, and knowledge-sharing sessions, to bring structure to previously ad hoc processes
- Maintained content quality standards through peer review and style guide enforcement, managing contributions from both internal and external contributors while ensuring consistent voice across product documentation

Language Proficiencies

- Markdown and MDX
- HTML and CSS
- JSON and YAML
- Javascript
- React
- Golang
- Python

Tools and Expertise

- Git and GitHub
- Knowledge management
- Information architecture
 - Diataxis • governance • taxonomy and metadata
- Docs-as-code/DocOps
- CI/CD pipelines
 - Github Actions
- DevOps workflows
- API references
 - Swagger/OpenAPI
- Kubernetes/Helm
- Docker
- Cloud infrastructures
- Agile methodologies
- CMS
 - Confluence • Notion
- Static site generators
 - Docusaurus • Hugo • Mkdocs • Jekyll
- Deployment platforms
 - Vercel • Heroku • Netlify • Cloudflare

BeyondTrust

Technical Writer

(Jan. 2023 - May 2024)

- Modernized content delivery and deployment methods, introducing additional branch-based automations, linting, and link testing to existing DevOps pipelines in Github and Buddy, reducing publishing time and deployment complexity
- Created new agile development processes and project tracking initiatives, evaluating gaps in team knowledge to design internal training opportunities and reduce skill and knowledge siloing
- Designed a cross-functional education plan to promote team enablement and development, training multiple teammates on content delivery pipelines, Git methodologies, and CLI tools
- Led research into AI and automation implementations to improve content development times and reduce manual editorial processes

Ethyca

Technical Writer

(Jan. 2022 - Jan. 2023)

- Led an update of product documentation and deployment methods, including the migration of content between existing Mkdocs and Vercel pipelines, Nextra markdown development, and a refactored information architecture
- Authored feature documentation for both open-source software and paid product offerings, reducing the barrier of entry for new users and increasing customer retention
- Produced key training manuals for high-profile client acquisition and marquee brands, including usage instructions for proof-of-concept tools and novel application architectures

Berkshire Hathaway Specialty Insurance

Software Engineer

(May 2019 - Jan. 2022)

- Designed and developed the API for a Golang RDS microservice used to store and access subscription renewal records, including the successful migration of key legacy data
- Led implementation on existing product enhancements, allowing product owners to customize desired features per product version through site-embedded dashboards
- Developed a Golang event-listener Lambda to integrate third-party email automations with current and future microservices, reducing reliance on deprecated legacy software
